

Drying Board

Instructions for using a Drying Board

Making pysanky has never been so easy or affordable. This sturdy *Drying Board* has many uses:

- essential for removing beeswax using the oven method
- provides a safe place for drying your varnished eggs
- protects eggshells while they are draining
- convenient place for resting your eggs while decorating

The oven method is a very effective and fast way to remove beeswax from your pysanky. Preheat your oven for 10 minutes at 200 degrees with the door open. Place the *Drying Board* in the centre of the oven and set up to 12 pysanky on the tripods. When the beeswax begins to melt, remove the pysanky, one at a time, and wipe off the beeswax with a soft cloth or paper towel. Make sure that the beeswax is thoroughly wiped off. Turn the oven off.

Be careful when moving the *Drying Board* with pysanky on it, they might fall off!
